DISCHARGE SUMMARY - EXTRACTED PDF TEXT
Patient: Camila Reed | Age: 58 | Sex: female
Hospital: Harborview District Hospital
Attending physician: Dr. Priya Shah | Specialty: Endocrinology
Admit date: 2026-05-05 | Discharge date: 2026-05-07
Diagnosis: Type 2 diabetes mellitus with recent hyperglycemia, improved before discharge. ICD-10: E11.65.
Medications: Metformin 500 mg by mouth twice daily with meals; avoid excess alcohol. Insulin glargine 18 units subcutaneously at bedtime; keep meal pattern consistent and do not skip meals without clinician advice. Empagliflozin 10 mg by mouth every morning; may take with or without food and drink adequate water. Atorvastatin 20 mg by mouth nightly; avoid large amounts of grapefruit.
Upcoming appointments: Primary care diabetes follow-up in 1 week with glucose log. Diabetes educator appointment in 2 weeks for meter and insulin pen review.
Go to the ER now for: blood sugar over 400 with vomiting or severe weakness, severe low sugar with confusion or passing out, chest pain, rapid deep breathing or fruity breath, or signs of severe dehydration.
Call the doctor within 24 hours for: repeated glucose readings above 250 or below 70, uncertainty about medication dosing, new infected wound, or inability to keep fluids down.
Diet/activity: consistent carbohydrate meals, check glucose as instructed, carry quick sugar source, walk daily as tolerated, avoid skipping meals.
