DISCHARGE SUMMARY - EXTRACTED PDF TEXT
Patient: Patricia Hill | Age: 63 | Sex: female
Hospital: Cedar Valley Hospital
Attending physician: Dr. Sara Whitman | Specialty: Orthopedic Surgery
Admit date: 2026-05-02 | Discharge date: 2026-05-05
Diagnosis: Aftercare following right total hip replacement. ICD-10: Z47.1; presence of right artificial hip joint Z96.641.
Medications: Acetaminophen 650 mg by mouth every 6 hours as needed; avoid alcohol and do not exceed the daily limit. Oxycodone 5 mg by mouth every 6 hours as needed for severe pain; take with food, avoid alcohol, and do not drive. Aspirin 81 mg by mouth twice daily for blood clot prevention; take with food and avoid extra NSAIDs unless surgeon approves. Senna-docusate 8.6/50 mg by mouth nightly while using opioids; take with water and fiber.
Upcoming appointments: Orthopedic surgery wound check in 10-14 days. Outpatient physical therapy twice weekly starting this week.
Go to the ER now for: chest pain or sudden breathing trouble, one calf becoming very painful/swollen, inability to bear weight after a pop or fall, uncontrolled bleeding, or fever over 101.5 F with pus from incision.
Call the doctor within 24 hours for: increasing incision redness/warmth/drainage, pain that is worsening despite medicine, constipation over 3 days, or low-grade fever.
Diet/activity: high-protein meals, fluids and fiber, weight bearing as tolerated with walker, follow hip precautions, no driving while taking opioid pain medicine.
