DISCHARGE SUMMARY - EXTRACTED PDF TEXT
Patient: Denise Walker | Age: 66 | Sex: female
Hospital: Northgate Community Hospital
Attending physician: Dr. Peter Lang | Specialty: Pulmonology
Admit date: 2026-04-30 | Discharge date: 2026-05-03
Diagnosis: Chronic obstructive pulmonary disease exacerbation, improved at discharge. ICD-10: J44.1.
Medications: Tiotropium 18 mcg inhaled once daily; no food interaction. Albuterol HFA 2 puffs every 4-6 hours as needed; no food interaction, rinse mouth if shaky or dry. Prednisone 20 mg by mouth daily for 5 days; take with food and avoid excess alcohol. Azithromycin 250 mg by mouth daily until finished; may take with food if stomach upset and avoid antacids within 2 hours.
Upcoming appointments: Pulmonology follow-up in 1 week. Primary care visit in 2 weeks; bring inhalers to visit.
Go to the ER now for: severe breathing trouble not relieved by rescue inhaler, blue lips or fingernails, chest pain, fainting, confusion, or oxygen saturation persistently below 90% if checked.
Call the doctor within 24 hours for: increased cough or change in sputum color, fever over 100.4 F, needing rescue inhaler more often than usual, or uncertainty about inhaler use.
Diet/activity: drink fluids unless restricted, small frequent meals, no smoking or vaping, use pursed-lip breathing, walk slowly and rest between activities.
